

EXAMPLE - 1

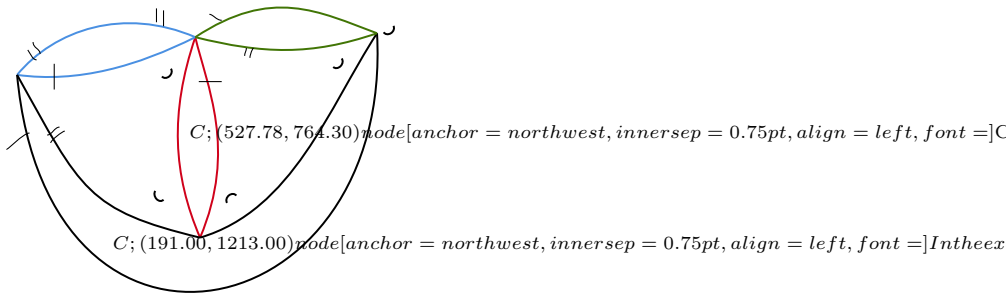

from Fleischner's construction, we get three candidates

(479.00, 202.00)node[anchor = northwest, innersep = 0.75pt, align = left, font =]S = {CCC; (604.00, 620.00)node[anchor = northwest, innersep = 0.75pt, align = left, font =]-containerhasa - container; (23.00, 798.00)node[anchor = northwest, innersep = 0.75pt, align = left, font =]EXAMPLE - 2; (555.07, 1214.61)node[anchor = northwest, innersep = 0.75pt, align = left, font =]S = {CCCC; (388.43, 779.19)node[anchor = northwest, innersep = 0.75pt, align = left, font =]

This G is produced by identification at the vertex 2

C: (191.00, 1213.00)node[anchor = northwest, innersep = 0.75pt, align = left, font = 1]In the example we get – container for all – container; (616.00, 785.00)node[anchor = northwest, innersep = 0.75pt, align = left, font = 1]; (466.00, 933.00)node[anchor = northwest, innersep = 0.75pt, align = left, font = 2]; (319.00, 806.00)node[anchor = northwest, innersep = 0.75pt, align = left, font = 3]; (461.00, 760.00)node[anchor = northwest, innersep = 0.75pt, align = left, font = 4]; (278.00, 1606.00)node[anchor = northwest, innersep = 0.75pt, align = left, font = 1]– container
